

WOODEN
WINDOWS AND DOORS

URZĘDOWSKI

The Urzędowski brand, present on the market for over 25 years, has become synonymous for high quality wood joinery. Both windows and doors, manufactured from carefully selected batches of wood, bring a unique ambience and cosiness to each room. This can only be achieved through natural materials, which have been used in the building industry for ages.

The products of Urzędowski have earned their reputation due to their unique design and continuous improvement in quality, while at the same time taking advantage of all the technical innovations. All the goods are solely custom-made and adapted to individual Customer needs, from the selection of wood type and to colours and accessories from our vast portfolio of designs, shapes and colours.

Due to this, each house can become a unique and exceptional place limited only by the Customers' imagination and taste.

In our catalogue, you may find windows designed both in subtle classic shapes and modern ones, which are more frequently used in cubic architecture.

All the products we offer are manufactured in one of the largest wood joinery plants in Poland, which operate to the highest technological standards. The high quality of products is guaranteed by the use of state-of-the-art numerical machine tools and electrostatic paint shops adapted to using thinned waterbased ecological paints.

We are convinced that the choice of products offered by Urzędowski is a decision that will give you satisfaction for many years to come.

Wooden windows and doors URZĘDOWSKI

Wooden windows

Design Line

Holland

DESIGN

- the special design of windows intended for the **Dutch** market
- outside: 3 type of shapes (1901, 1903, 1906)
- inside shape: **Classic**
- frame profile: 140 mm
- 12 varnish colours and all RAL colours available

TECHNOLOGY

WOOD

- highest quality of construction elements in each layer controlled thanks to the production of our own square-sawn timber
- basic woods: pine wood, oak wood, meranti
- exotic woods: "sapele" mahogany, iroko, teak, American walnut
- verified and controlled sources of timber supply

VARNISHING

- precisely repeatable quality of the varnish coating thanks to the automated varnishing lines made by **Wagner/Eisenmann**
- electrostatic technology ensuring even application of the varnish, even in the most inaccessible places of the structure
- water-soluble **PPG** varnishes which are harmless to health

FUNCTIONALITY

- tilt and turn fittings
- standard anti-burglar catch
- air vents, mounted in the frame of the sash or between top of the glass and the frame

ENERGY EFFICIENCY

MULTIPLE LAYER GLUED-LAMINATED TIMBER
the warmest natural construction material

2 GLAZING UNITS

- option to use glazing units from $U_g=1.0 \text{ W/m}^2\text{K}$
- option to use **Swisspacer Advance and Ultimate**

System Holland

| wooden window |

Profile thickness: 114–140 mm

Wooden & wooden-aluminium windows

Design Line

Casement IPA

DESIGN

- typical design in **UK or Skandynavian** market
- outside: **wood or aluminium frame**
- inside shape: **Classic**
- sash profile thickness: 68 mm
- frame profile: 92 mm
- 12 varnish colours and all RAL colours available

TECHNOLOGY

WOOD

- highest quality of construction elements in each layer controlled thanks to the production of our own square-sawn timber
- basic woods: pine wood, oak wood, meranti
- exotic woods: "sapele" mahogany, iroko, teak, American walnut
- verified and controlled sources of timber supply

VARNISHING

- precisely repeatable quality of the varnish coating thanks to the automated varnishing lines made by **Wagner/Eisenmann**
- electrostatic technology ensuring even application of the varnish, even in the most inaccessible places of the structure
- water-soluble **PPG** varnishes which are harmless to health

FUNCTIONALITY

- open to outside: **IPA system**
- air vents, mounted in the frame of the sash or between top of the glass and the frame

ENERGY EFFICIENCY

MULTIPLE LAYER GLUED-LAMINATED TIMBER

- **Galux Softline** profile (88 mm), **Lexo Softline** profile (68 mm)
- the warmest natural construction material

3 GLAZING UNITS

- option to use glazing units from $U_g = 0.4 \text{ W/m}^2\text{K}$ ($U_g = 1.0 \text{ W/m}^2\text{K}$ for double glaze and $U_g = 0.5 \text{ W/m}^2\text{K}$ for triple glaze in Alu clad)
- option to use **Swisspacer Advance and Ultimate**

System Casement IPA

| Wooden - window |

Climaplust ONE – $U_g = 1.0 \text{ W/m}^2\text{K}$

Wooden windows

Design Line

Q-Sash

DESIGN

- the design based on the **Dutch** windows is a combination of the upper wing (fixed) and lower part which imitates the vertical sliding sash
- inside shape: **Classic**
- sash profile: 68 mm
- frame profile: 140 mm
- 12 varnish colours and all RAL colours available

TECHNOLOGY

WOOD

- highest quality of construction elements in each layer controlled thanks to the production of our own square-sawn timber
- basic woods: pine wood, oak wood, meranti
- exotic woods: "sapele" mahogany, iroko, teak, American walnut
- verified and controlled sources of timber supply

VARNISHING

- precisely repeatable quality of the varnish coating thanks to the automated varnishing lines made by **Wagner/Eisenmann**
- electrostatic technology ensuring even application of the varnish, even in the most inaccessible places of the structure
- water-soluble **PPG** varnishes which are harmless to health

FUNCTIONALITY

- the lower sash: tilt and turn function
- standard anti-burglar catch
- the tilt and turn function ensures perfect tightness of the construction

ENERGY EFFICIENCY

MULTIPLE LAYER GLUED-LAMINATED TIMBER
the warmest natural construction material

2 GLAZING UNITS

- option to use glazing units from $U_g = 1.0 \text{ W/m}^2\text{K}$
- option to use **Swisspacer Advance and Ultimate**

System Q-Sash

| wooden window |

Profile thickness: 114–140 mm

DOOR LEAF TILT ONLY IN THE MZ ALU SYSTEM

THE EXTERIOR DOOR

VILLA line

The exterior door is made using a profile with a width of

88 mm

The door has a frame and panel structure. The door leaf frame and the door frame are made from glued-laminated timber ("block" or 4-layer gluing).

The central part of the door leaf is a sandwich panel:

- in the case of solid door designs, it is a combination of water-resistant plywood and a heat-insulating insert
- in the case of glazed door designs, it is a combination of water-resistant plywood and a glazing unit (P4/16Ar/4 parsol brown ESG)

Innovative hinge system made by
SIMONSWERK type Baka Protect 3D.
BANDOTECHNIK

comes as standard in the exterior door

Advantages of the applied Baka Protect 3D hinges:

- three-plane adjustment (side play, closing pressure, height)
- convenient adjustment without the need to take the door off its hinges
- high load capacity of 130 kg
- maintenance-free WF slide bearings technology (additional plastic sliding ring on the bearing ensures many years of optimum hinge operation)

GU strip lock, model MR 2

Advantages of the applied lock:

- 3-point locking
- two massive locks with a steel insert providing protection against cutting through
- sealed lock case – foreign bodies do not interfere with the operation
- optimum anti-corrosion protection thanks to the application of ferGU electroplated coating

Standard exterior door dimensions:

width	height
1060 mm	
1100 mm	2110 mm
1160 mm	

Custom-made doors may also be ordered, including custom dimensions and design in accordance with the Customer's specification.
